

## Air Cool Transformer Rectifier Multiple Circuits

High quality automatic and manual Transformer Rectifiers for cathodic protection, application to buried structures, storage tanks, concrete structures, etc. Transformer rectifiers are rugged in construction, designed to withstand harsh conditions in which they operate.

### Features

Input AC:	Single phase or Three phase
Output DC:	50 V and 50 Amps max.
Enclosure:	IP55, IP56 & IP65, wall or base mounted
Type of control:	Manual – Variac or Tap control Constant Voltage Constant Current Auto Reference and Selection Control
Protection:	- Fast acting electronic over current limit and short circuit protection for output - Glass cartridge fuses in live line of all lamps and auxiliary power lines to control circuit

### Options

- Current Interrupter with/without GPS interface
- SCADA Interface Facility for Remote Monitoring and Control
- Remote Monitoring through GSM Data Logger
- Hours Run Meter/Time Totalizer
- Data logger
