

Impressed Current CP

Air Cool Transformer Rectifier (Single Circuit) with Built-in Multiple Shunts

Highly durable single circuit manual control air-cool transformer rectifiers (TR) built in ISO which contains multiple anode shunts. TR is equipped with a separated AC and DC warning ramp on the cabinet door.

Temperature warning light is optional.

Features

- Manual tapping adjustable DC Voltage Output (10 steps)
- Heavy-duty lightning surge protection modules for AC and DC
- AC and DC power indicators on the cabinet door
- Over-temperature indicator on the cabinet door (option)
- Built-in positive anode shunt resistors (max.10 shunts)
- Two negative terminals
- AC and DC breakers
- “ON-Off” timer

Heavy-duty lightning surge protection modules for AC& DC and AC&DC breakers

Multiple DC shunt resistor in cabinet (Single shunt is also available.)
