

# Cathodic Protection (CP)

## Cott Shunts for Cathodic Protection Test Station

When sacrificial anode cathodic protection is used, the current output needs to monitor at a test station. This uses a shunt resistor.

Three resistance values are available for COTT Fink test stations.

Orange 0.001 Ohm resistor:	25 Amp max
Yellow 0.01 Ohm resistor:	8 Amp max
Red 0.1 Ohm resistor:	2 Amp max
Operating temperature:	-76°C to 122°C
