

Betelguard Ribbon Mesh Anode for Chloride Extraction is designed for the high anode current density during the chloride extraction process using specialized MMO technology. Since the current density needed for chloride extraction is over 50 times higher than cathodic protection.

MUI International offers the following items for each chloride extraction project:

- Proper anode designed for the chloride extraction for a specific condition.
- Electrolyte package
- Power supply unit
- Chloride concentration testing in concrete

Chloride Extraction Test Results
